HORUS LINEAR POLISHER

Our linear polisher is the result of more than a decade of experience servicing every type of polishing machine in the granite industry.

It does not use pneumatic systems; instead, it is 100% mechanical, making it extremely easy to operate and the most reliable, low-maintenance option on the market.

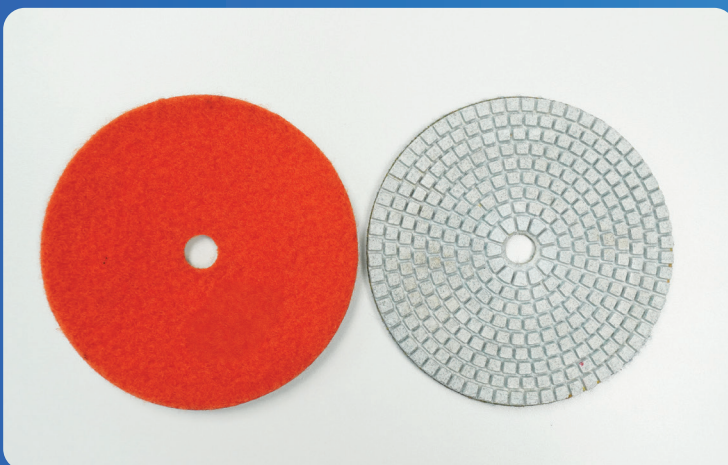

This design responds exactly to what our customers look for in this type of machinery.

Our polisher completes in just 20 minutes what a person would manually accomplish in two full days of work, performing a flat polish with bevel.

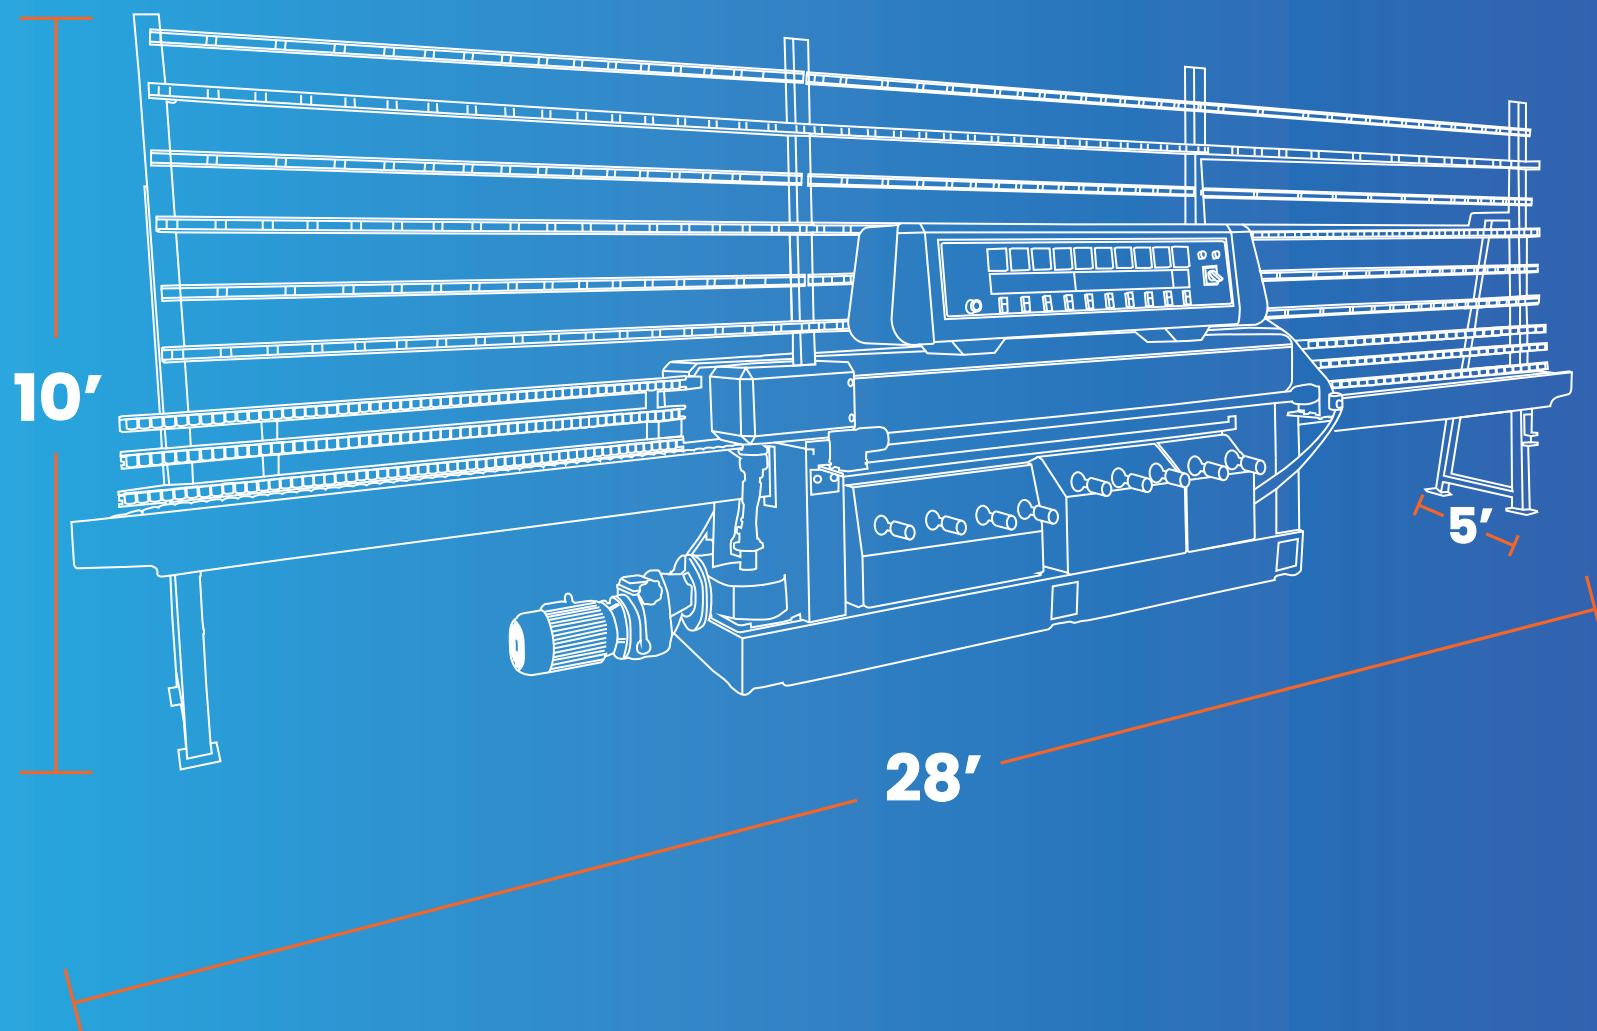

GENERAL FEATURES

- Operates without air consumption and includes an integrated water recycling system.
- Interchangeable velcro-backed pad system, easy to install and replace.
- Space-saving design: The most compact and heaviest in its category.
- Built-in water recycling system: Does not require clean water.
- No external connections: Does not require any air connections.
- Adjustable feed speed: Configurable for different materials, textures, and production needs.
- Finish-ready results with no touch-ups needed: Produces pieces 100% ready for installation.
- High polishing capacity: Equipped with nine heads for a precise and uniform finish.
- 1-year warranty.

We offer FREE lifetime video-call support via WhatsApp to ensure your production never stops.

Use pads with
Velcro.

Model	HORUS
Weight	5,500 lbs
Electrical Supply	220 V / 85 A (three-phase)
Water consumption	30 gallons per minute
Production in inches	155" per minute
